

ElectroShop ERP — Entity Relationship Diagram

All 19 database tables and their relationships. SQLite with foreign key constraints.

Tables Overview

users	Central user table (customer, employee, owner, superadmin)
owner_profiles	Subscription, limits, branding (white-label)
employee_profiles	Position, salary, branch assignment
customer_profiles	Loyalty points
categories	Product categories with Swahili translations
products	Product catalog (name, brand, SKU, image)
product_variants	Size/color/storage with individual pricing & stock
inventory	Stock tracking per variant
branches	Physical store locations (owner-scoped, optional)
addresses	Customer delivery addresses
orders	Orders with status workflow & delivery method
order_items	Line items (FK CASCADE on delete)
payments	Payment records (FK CASCADE on delete)
payment_providers	M-Pesa, Airtel, etc.
shipping_rules	Wildcard city-to-city with value-based tiers
daily_reports	Auto-generated daily sales summaries
support_messages	Customer tickets with admin replies
conversations	superadmin-owner & customer-owner messaging
conversation_messages	Individual messages within conversations

Key Relationships

- users → owner_profiles: 1:1, subscription & branding
- users → employee_profiles: 1:1, optional branch link

- categories → products → variants → inventory: cascading hierarchy
- users → orders: customer places, employee handles
- orders → items/payments: ON DELETE CASCADE
- conversations → messages: threaded messaging

Order Status Workflow

pending_payment → pending → paid → processing → shipped → delivered
