4. Uploading Supplier Documents
5. Managing Suppliers
6. The Supplier Portal
7. Purchase Orders
8. Support & Contact

1. Introduction

This manual explains how suppliers are onboarded into the ERP Electronics system and how they work with the business. A supplier is a company, partnership or individual who provides products or materials to the store through purchase orders.

How it works

- Suppliers are registered by the store owner, who enters the business details and required legal documents.
- Each supplier keeps a record of Tanzanian legal documents (registration, tax and licensing certificates).
- Approved suppliers can be linked to purchase orders and use the Supplier Portal to view and fulfil orders.

2. Registering a Supplier

To add a supplier, open the Supplier Management page from the owner dashboard. The registration form captures the supplier's contact details, Tanzanian business information and legal documents.

Contact details

- Business name, contact person, phone and email.
- Physical address, city and country.

Tanzanian business details

- Business type — Sole Proprietorship, Partnership, Limited Company or Other.
- TIN Number (Taxpayer Identification Number issued by TRA).
- VAT Number — if the business is VAT registered.
- Business Registration Number (issued by BRELA).

Supplier status

- A supplier can be marked active or inactive. Inactive suppliers cannot be selected for new purchase orders.

3. Required Tanzanian Legal Documents

Tanzanian law requires suppliers to hold valid business and tax registration documents. The system stores a digital copy of each document so the business can verify the supplier before placing orders. The documents below follow the standard Tanzanian supplier documentation format.

#	Document	Issued By	Purpose
1	Business Registration Certificate	BRELA	Proves the business is legally registered in Tanzania.
2	TIN Certificate	TRA	Taxpayer Identification Number certificate; required for tax compliance and issuing invoices.
3	VAT Registration Certificate	TRA	Required when annual turnover is above the VAT threshold (TZS 100 million); allows VAT invoicing.
4	Business License	Local Government Authority	Annual trading permit issued by the city or municipal council where the business operates.
5	Certificate of Incorporation	BRELA	Confirms a limited company is incorporated under the Companies Act.
6	Identification Document	NIDA / Government	National ID (NIDA) for individual suppliers; a passport or driving licence for foreign suppliers.
7	Signed Supply Contract	Both parties	The agreement between the supplier and the business covering terms of supply.

Accepted file formats

- PDF, JPG, JPEG, PNG, DOC or DOCX.
- Each document must be 20 MB or smaller.
- Documents are stored securely under the supplier's record and can be downloaded or deleted by the owner at any time.

4. Uploading Supplier Documents

Documents are uploaded in the Add or Edit Supplier form, in the "Legal Documents (Tanzanian Format)" section.

#	Action
1	Open the Add Supplier or Edit Supplier form.
2	Click the file drop area and select the document files (multiple files allowed).
3	For each file, choose the correct document type from the list (Contract, BRELA, TIN Certificate, VAT Certificate, Business License, Certificate of Incorporation, Identification, Other).
4	Complete the remaining supplier details and save. For an existing supplier, uploaded documents are saved automatically.

When editing a supplier you can also download or delete previously uploaded documents from the same section.

5. Managing Suppliers

Viewing suppliers

The Supplier Management page lists all suppliers with their contact person, phone, email, city, number of purchase orders and active status. Use the search box to find a supplier by name, contact or email.

Editing a supplier

#	Action
1	Click the edit icon next to a supplier.
2	Update the contact or business details as needed.
3	Upload new documents or delete outdated ones.
4	Save your changes.

Deleting a supplier

A supplier can only be deleted if they have no purchase orders. Suppliers with an order history are kept for accounting and reporting purposes.

6. The Supplier Portal

Registered suppliers can receive their own login credentials so they can use the Supplier Portal. After logging in with the email and password provided by the owner, the supplier sees their dashboard with three summary cards: Total Orders, Pending Delivery and Completed.

- The supplier can view all purchase orders assigned to them.
- Each order shows the PO number, date, line items, total cost, status and expected date.
- Order details list the exact products, quantities and unit costs to be supplied.
- The supplier can open an order and mark it as Received once the goods have been delivered.

7. Purchase Orders

A purchase order (PO) is created by the owner when the store needs to restock products. The order records the supplier, the products, quantities and unit costs. Each PO follows a status

flow:

Draft	The order has been created but not yet confirmed with the supplier.
Ordered	The order has been sent to the supplier and is awaiting delivery.
Received	The supplier has delivered the goods and the order is complete.

When the supplier marks an order as received, the stock is updated automatically and the goods become available for sale.

8. Support & Contact

For help with onboarding, document requirements or using the portal, contact the store owner or your system administrator. The owner manages supplier records, document verification and portal access from the Supplier Management page.
